```
Q2) import java.io.*;  
Public class ReadFile {  
    Public static void main (String [] args) throws Exception {  
        FileWriter Custom fwc = new FileWriter(Custom());  
        fwc fileWriter();  
        fwc palindrome();  
    }  
}  
class FileWriterCustom {  
    void fileWriter () throws Exception {  
        int i;  
        PrintWriter out = new PrintWriter(new FileWriter("one.txt"))  
        for(i=100; i<50; i++) {  
            out.println(i);  
            out.flush();  
        }  
    }  
}  
void plaindrome () throws Exception {  
        File Reader  
        BufferedReader reader = new BufferedReader(new PrintWriter  
        ("one.txt"));  
        PrintWriter out1 = new PrintWriter(new FileWriter("two  
        txt"));  
        String line = reader.readLine();  
        out1.println("Printing Reverse");  
        while (line != null) {
```

```
String reversed = new  
StringBuilder(line).reverse().toString();  
out.println(reversed);  
out.flush();  
line = reader.readLine();  
} }  
reader.close();  
}  
}
```
