Q 2

```
import java.io.*;  
public class Readfile  
{  
    public static void main (String [] args) throws Exception  
    {  
        FileWriterCustom fwc = new  
            FileWriterCustom ();  
        fwc.fileWriter ();  
        fwc.palindrome ();  
    }  
}  
class FileWriterCustom  
{  
    void fileWriter () throws Exception  
    {  
        int i;  
        PrintWriter out = new PrintWriter (new FileWriter  
            ("one.txt"));  
        for (i = 100; i < 150; i++)  
        {  
            out.println (i);  
            out.flush ();  
        }  
    }  
    void palindrome () throws IOException  
    {  
        }
```

```
BufferedReader reader = new  
BufferedReader(new FileReader("one.txt"));  
PrintWriter out1 = new PrintWriter(new FileWriter  
("two.txt"));
```

```
String line = reader.readLine();
```

```
out1.println(reversed);
```

```
out1.flush();
```

```
line = reader.readLine();
```

```
}  
reader.close();
```

```
}
```

```
}
```
