```java
import java.util.Scanner;

class Filehandling {
    FileWriter fileWriter1, fileWriter2;
    Scanner s1;

    Filehandling() throws IOException {
        fileWriter1 = new FileWriter("one.txt");
        fileWriter2 = new FileWriter("two.txt");
    }

    void insert() {
        try {
            for (int i = 100; i <= 150; i++) {
                fileWriter1.write(i + "\n");
            }
            fileWriter1.close();
        } catch (Exception e) {
            System.out.println("Exception");
        }
    }

    void reverse() {
        try {
            s1 = new Scanner(new File("one.txt"));
            while (s1.hasNext()) {
                String a = s1.next();
                String reversed = new StringBuilder(a).reverse().toString();
                fileWriter2.write(reversed + "\n");
            }
            fileWriter2.close();
        } catch (Exception e) {
            System.out.println("Exception");
        }
    }
```
